

FSM Login Access

The following shows steps logging into ELMS FSM utilizing the E-ICAM integration. Note that these changes will be in effect whether you login to FSM first or redirect to it after logging into another application.

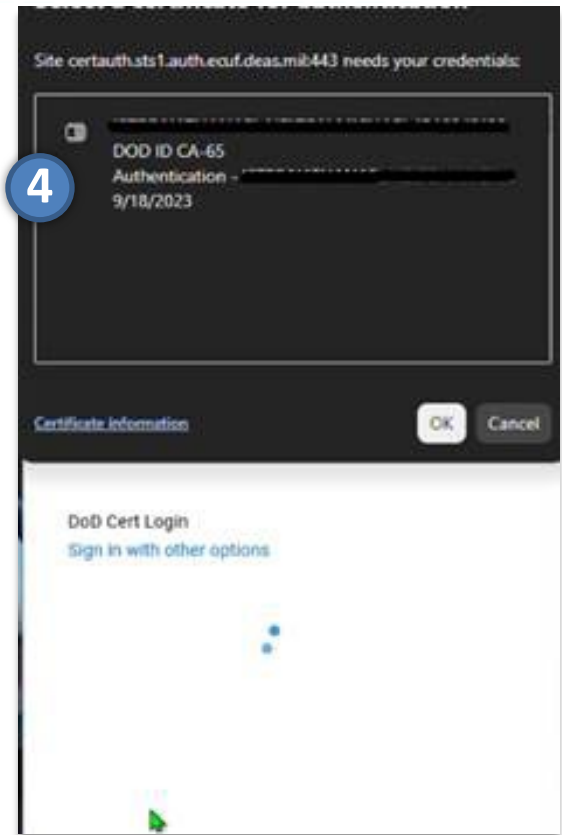

1. If you are not already, you will be required to have a CAC and select it when you are prompted for a certificate.
2. You will be redirected to the DoD E-ICAM IdP (Identity Provider) screen. Select the “CAC or other DoD token” option.
3. Then select the “Sign in with CAC/PIV” option.

FSM Login Access – Continued

4. You will be prompted again for your CAC certificate.
5. If you have not already accepted monitoring, you will then be redirected to the Consent To Monitor screen where you must accept to continue.
6. The Login process should then proceed as it has in the past and you will eventually be redirected to the FSM landing page.

The application should work as it has previously. If you encounter any problems or unexpected changes, please contact support immediately.
