

Search for a Stock Number Inquiry

Overview

The Property Accountability module Stock Number Inquiry process provides the ability to search for Stock Number records.

Each Stock Number is unique to a specific catalog within each logistics program and can only be added once per catalog.

There are four types of stock numbers identified by the STOCK ITEM CD:

- **A - NSN** (National Stock Number)
 - from FEDLOG or TDMS or other DoD lists.
- **J - MCN** (Management Control Number)
 - created at the local level, when an NSN does not exist for that asset.
- **B - PART NBR** (Part Number)
 - created by either the manufacturer or the local level.
- **I - Intangible** (Intangible)
 - created for Software and other stock that has no physical presence.
- **L - Local** (Local)
 - created at the local level, when the MCN does not fit the required form for the asset.

ELMS interfaces with the DoD Federal Logistics Information Services (FLIS), and can interface with Enterprise Agency Catalogs (e.g., the United States Marine Corps Technical Data Management System - USMC TDMS). The FLIS allows the Warehouse Management module to access NSN data in the Federal Logistics Data (FEDLOG). The TDMS allows the Warehouse module to access NSN data in the Marine Corps standard catalog information.

The Line Item Number (LIN) / Table of Authorized Materiel Control Numbers (TAMCN) plays a key role in managing equipment. The LIN/TAMCN can be thought of as a Group ID. Stock numbers are grouped under one LIN/TAMCN. For example, when the Warehouse receives a LIN/TAMCN for equipment of various sizes, a Stock Number is assigned for each size.

Note

Some fields provide **Intellisense**, which is the automatic completion of a field entry in a software application.

The application displays a selectable word or phrase in that field, based on the input (that was previously entered), without having to completely type the entry.
