

Search for Utilization Exceptions Update – Criteria

Overview

The Property Accountability module Utilization Exceptions Update process provides the ability to review Utilization Exceptions data in ELMS. Exceptions are created when data is imported into ELMS but has no matching asset record or has more than one matching record. This process is used to mark received assets as ELMS assets or non ELMS assets.

Note

No additions or deletions to the utilization exceptions are made through this process. ELMS can receive service life and usage data sent from an interface such as Aircraft Inventory Readiness and Reporting System (AIRRS).
