

Manage a LIN/TAMCN List

Overview

The Warehouse Management module Manage LIN/TAMCN Lists process provides the ability to create, update, and delete lists that are used for custom reporting. LIN/TAMCN Lists are managed and shared at different Enterprise Levels such as Logistics Program, Region, Site and Warehouse.

Sharing a LIN/TAMCN List allows other personnel access to the list within levels (Logistics Program, Region, Site, and Warehouse) of the Logistics Program.

- If the list is shared, elements below the selected level have access to the list. *For example, a list shared at the Region level allows access at that level and elements directly beneath the Region. Other Regions and their lower levels do not have access.*
- If the list is not shared, it is accessible locally only to the list creator.

Attention

Only the list creator can edit (update or share) the list.
