```

Web Release 2.0.00 for the Defense Property Accountability System (DPAS) Tech Refresh effort was released on 18 December 2011. There is no action required by the user to receive the update.

_____

System Change Request (SCR) in this release:

The following capabilities are being provided with this SCR:

DPAS – 00435 – Military Accounting Transition from CAMS to DPAS. The CAMS requirements provided by Office of Secretary of Defense need to be added to the functionality of DPAS if it currently does not exist.

- **AIRRS Utilization Interface Import – WPUTI01 –** Import will provide data to update the Asset Utilization for Maintenance.

- **AIRRS Utilization Interface Import Update – WPUTI02 –** Import data will update the revised Asset Utilization Structure.

- **AIRRS Service Life Interface Import – WPUTI03 –** Import will provide data to update the "TD" and possible Catalog Master with revised service lives.

The following capabilities are being provided with this SCR:

DPAS – 00458 Mass Transfer UIC. This SCR is to provide for the retention / change of the Agency Defined Fields when performing a Mass UIC to UIC Transfer.

- **Asset Transfer – WPHRN52 –** The Mass UIC Transfer portion of the Asset Transfer process was modified to carry forward the Agency Defined Field(s) data for all assets being transferred from one UIC to another. It also allows for the user to modify one or more of the Agency Defined Fields (Mass) when there is a need to change one or more values.

The following capabilities are being provided with this SCR:

DPAS – 0459 Mass Transfer Custodian. This SCR is to provide for the retention / change of the Agency Defined Field(s) when performing a Mass UIC to UIC transfer.

- **Asset Transfer – WPHRN52 –** The Mass Custodian Transfer portion of the Asset Transfer process was modified to carry forward the Agency Defined field(s) data to the Gaining Custodian. It also provides the capability to change the values, when desired.

The following capabilities are being provided with this SCR:

DPAS – 00474 Mass Update of Agency Defined Field(s) – This SCR provides the user with the capability to update Agency Defined Field(s) on select assets in mass.

- **Asset Update – WPHRN51 –** The process was modified to allow for the update of Agency Defined Field(s) for all selected assets. Prior to this change, Agency Defined Field changes were limited to a single asset update.

The following capabilities are being provided with this SCR:

DPAS-00497 – Barcodes Not Inventoried. This SCR provides for a new Agency Defined Report that provides a listing of all of the assets that have not been inventoried in the current inventory cycle. Assets that have been scanned and are part of an Open Inventory (Not Reconciled) will be considered inventoried for the purposes of this report. The report will mirror the summary Agency Defined Reports that provides summary counts (Inventory Counts by UIC and Inventory Counts by Custodian).

- **Assets Not Inventoried – WCUSS36 –** A new report that compares the Inventory Plan Start Date to the Last Inventory Date of the assets. The report would display what assets and barcodes that have not been inventoried in the current inventory cycle.

The following capabilities are being provided with this SCR:

DPAS-0514 – Modify the Asset Extract / Update Interface. The Asset Import Update process was modified to provide for additional update logic and the Asset Extract process was modified to include additional fields.

- **Asset Import Update – WPHRI07** – The Import Update process was modified to update the following additional fields for an Inventory – Reconciled Quantity, Recociled Location, Reconciled Sub Location, Reconciled Last Inventory Date, Reconciled Inventory Input Type, Cause of Last Reconciliation Date Change, Reconciled Inventory User Identification and Cause of Last Date Chagne. This change was required to ensure that DPAS reflects the expected inventory status of the asset being reported as inventoried.

- **Asset Outbound Extract – WPSAB45 –** The Asset Extract process was modified to include the Manufacturer Year, Contract Number, Original Placed In Service Date, Line Item Number (LIN)/TAMCN, Local Receipt Date, Interim Inventory Number, Interim Inventory Initialized Date, Interim Inventory Status, Interim Inventory Date/Time, Interim Inventory Locaiton, Interim Inventory Sub Location, Interim Inventory Input Type and Interim User Id fields.

- **Asset Update XML Schema – WPHRL01** - Changed the schema to accommodate additional fields and allow for optional fields.

The following capabilities are being provided with this SCR:

DPAS-00327 – DPAS Tech Refresh. This change adds a Maintenance / Utilization application to DPAS. Users desiring to use this application should contact the DPAS Support Desk to obtain the information needed to establish a Maintenance Activity. Once a Maintenance Activity is established, users can be granted access to it and the Property Administrator can assign their assets to the Maintenance Activity that will be performing the maintenance of their assts using the Maintenance Management Assignment process. User access is similar to that of the Property Accountability application. Users will be granted "roles" by Maintenance Activity, thus if a user has been assigned to more than one Maintenance Activity, they could have different roles within each. Asset access is controlled by the Maintenance Activity the user is associated with. In some instances, the user could be assigned to an Equipment Pool that further restricts what assets the user can update/view. DPAS security controls what Maintenance Activity a user is granted access to. Equipment Pool access is controlled by personnel associated with the Maintenance Activity that has been grated access to the role that contains the process that associates users with an Equipment Pool. The Maintenance / Utilization capabilities include associating assets with an Equipment Pool, establishing PM Scehedules, Reporting Utilization / Fuel Consumption and Generating and Managing Work Orders.

The following capabilites are being provided to the Property Accountability application with this SCR:

- **Stock Number Add/Update/Delete – WPCTN01 –** Process was modified to disabled the Maintenance Group in the update screen. The update of the Maintenance Group was relocated to the Mass Stock Number process to allow for adding/removing of assets from/to Maintenance Activities.

- **Stock Number/Selected Mass Update – WPCTN02/WPSAB18 –** Process was modified to call the Maintenance Asset Master Add/Delete common function to add /remove assets from a Maintenance Activity.

- **Inventory Management Plan Update – WPHRN01 –** Process was modified to add a control to allow the Agency to Allow, Disallow or Defer the Inventory Date to be updated by Maintenance Actions. This accomodates the Sponsor's requirement to update Inventory Dates by Maintenance for certain customers.

- **Asset Receiving – WPHRN11/WPSAB13 –** Process was modified to support the reporting of an asset to a Maintenance Activity when the asset is subjected to Maintenance Management.

- **Asset Disposition – WPHRN29 –** Process was modified to remove the asset from Maintenance Management upon Disposition.

- **Asset Update – WPHRN51/WPSAB17 –** Process was modified to support the removal of an asset from a Maintenance Activity and /or to add it to a Maintenance Activity when the asset's Stock Number is changed.

3

- **Asset Transfer – WPHRN52/WPSAB15 –** Process was modified to support the removal of an asset from a Maintenance Activity and / or to add it to a Maintenance Activity when the asset's owner (UIC) or Catalog Stock Number is changed.

- **Disposition Reversal Background Process – WPSAB21 –** Modified the process to restore the asset to the Maintenance Activity when the asset is placed back on the property book.

- **Warranty/SVC/SUBSCRPTN TERMS/COND Add/Update/Delete – WPHRN73 –** Assigned a new Process Id to this process due to adding same a Maintenance Application.

- **Warranty/SVC/SUBSCRPTN Asset Assoc Add/Delete – WPHRN74 –** Assigned a new Process Id to this process due to adding same a Maintenance Application.

- **Contract Inquiry – WPHRQ28 –** Process was modified to add contract history tab and allow for the viewing of deleted contracts.

- **Contractor Inquiry – WPHRQ29 –** Process was modified to add status to search criteria to enable the viewing of previously deleted Contractor records.

- **Warranty/SVC/SUBSCRPTN Terms/Cond Inquiry – WPHRQ36 –** Assigned a new Process Id to this process due to adding same a Maintenance Application.

- **Asset Warranty/SVC/SUBSCRPTN Assoc Inquiry – WPHRQ37 –** Assigned a new Process Id to this process due to adding same a Maintenance Application.

- **Security Login Validation – WPSEN01 –** Process was modified to support the new DPAS Maintenance / Utilization application.

- **Message of the Day Add/Update/Delete – WPSEN17 –** Process was changed to allow for Maintenance Activity Level messages to support the new Maintenance / Utilization Application.

- **Users Add/Update/Delete – WPSEN24 –** Process was modified to upport the new Maintenance / Utilization Application.

- **User Maintenance Activity Add/Update/Delete – WPSEN33 –** New process added to enable security personnel to associate a user with maintenance activity and roles.

- **Maintenance Activity Add/Update/Delete – WPSEN34 –** New process added to enable security personnel to create and maintain maintenance activities.

- **AIRRS Utilization Interface Import Update – WPUTI02 –** Process was modified to implement Asset Utilization Data stored as transaction based vice cumulative.

- **Address Add/Update/Delete – PA - WPUTN13** – Process was modified to not display address types that are specific to Maintenance and ensure delete still worked as designed. "DE – DESTINATION OTHER", "MO – MAINTENANCE OFFICER", "EP – EQUIPMENT POOL" (on Property Accountability side only) and "DN – DESTINATION".

- **Asset Utilization Add/Update/Delete – WPUTN30 –** Process was modified to accommodate the recording of Asset Utilization based upon transactions rather than recording everything as cumulative.

- **Asset Utilization Inquiry – WPUTQ09 –** Process was modified to allow for the changes in how Utilization is being stored.

- **Utilization Interface Import Report – WPUTR15 –** Process was changed to accept Asset Utilization data stored as transaction based vice cumulative.

The following capabilities are being provided to the DPAS Maintenance / Utilization Application with this SCR:

- **Warranty/Svc/Subscrptn Terms/Cond Add/Update/Delete – WPMAN01 –** New process added to the Maintenance / Utilization Application. Functions the same as the Property Accountability process, except with different security due to the user being assigned to a Maintenance Activity versus a Site/UIC within the Property Accountability Application.

- **Warranty/Svc/Subscrptn Asset Assoc Add/Delete – WPMAN02 –** New process added to the Maintenance / Utilization Application. Functions the same as the Property Accountability process, except with different security due to the user being assigned to a Maintenance Activity versus a Site/UIC within the Property Accountability Appication.

- **Maintenance Activity Update – WPMAN03 –** New process added to enable personnel within the Maintenance Activity to update information concerning the Maintenance Activity they are assigned to.

- **Operator/Technician Add/Update/Delete – WPMAN04 –** New process added to add, update and/or delete Equipment Operators and Maintenance Technicians.

- **Certification/License Add/Update/Delete – WPMAN05 –** New process added to add, update and/or delete Certification and Licensing information.

- **Equipment Pool Add/Update/Delete – WPMAN06 –** New process added to add, update and/or delete equipment pools.

- **Maintenance Team Add/Update/Delete – WPMAN07** – New process added to add, update and/or delete Maintenance Teams.

- **Work Plan Add/Update/Delete – WPMAN08 –** New process added to add, update and/or delete Work Plans.

- **Work Plan Detail Add/Update/Delete – WPMAN09 –** New process added to identify tasks/parts/equipment/certifications that are associated with a Work Plan.

- **Maintenance Asset Profile Add/Update/Delete – WPMAN10 –** New process added to profile an asset that is subject to Maintenance Management.

- **Schedule Preventive Maintenance Add/Update/Delete – WPMAN11 –** New process added to maintain Maintenance Schedules for an asset. The system will utilize this information to automatically generate work orders when the preventive maintenance is due.

- **Work Order Add/Update/Delete – WPMAN12 –** New process added to add, update and/or delete work orders.

- **Maintenance Actions Add/Update/Delete – WPMAN15 –** New process added to identify open maintenance work actions for personnel.

- **Contractor Add/Update/Delete – WPMAN19 –** New process added to enable maintenance personnel to maintain Contractor information in support of Warranty tracking or when they are obtaining their Maintenance support from external sources.

- **Contract Add/Update/Delete – WPMAN20 –** New process added to enable maintenance personnel to maintain Contract information in support of Warranty tracking or when they are obtaining their Maintenance support from external sources.

- **Audit Viewer – WPMAN21 –** New process added to enable the user to view history of the events entered into DPAS by personnel of the Maintenance Activity.

- **Journal Viewer – WPMAN22 –** New process added to enable the user to view detailed activity of the events entered into DPAS by personnel of the Maintenance Activity.

- **User Equipment Pool Add/Delete – WPMAN23 –** New process added to enable maintenance personnel to be associated with assets associated with an Equipment Pool.

- **Maintenance Asset Utilization Record/Update/Delete – WPMAN24 –** New process added to enable the recording of utilization and fuel consumption.

- **Maintenance Attachment Add – WPMAN29 –** New process added to enable users to upload attachments for select Maintenance and Utilization processes.

- **Warranty/Svc/Subscrptn Terms/Cond Inquiry – WPMAQ01 –** New process added to enable the user to view warranty information.

- **Asset Warranty/Svc/Subscrptn Assoc Inquiry – WPMAQ02 –** New process added to enable the user to veiw warranty information.

- **Asset Preventive Maintenance Schedule Inquiry – WPMAQ08 –** New process added to enable the viewing of Preventive Maintenance schedules by asset.

- **Maintenance Schedule Inquiry – WPMAQ10 –** New process added to show details about Assets that are subject to Maintenance such as Maintenance Activity, Equipment Pool, Utility Measure and etc.

- **Work Order Inquiry – WPMAQ13 –** New process added to view opened and closed work orders.

- **Maintenance Asset Utilization Inquiry – WPMAQ15 –** New process added to view asset utilization information.

- **Work Plan Inquiry – WPMAQ16 –** New process added to view work plan information.

- **Contractor Inquiry – WPMAQ18 –** New process added to view contractor information.

- **Contract Inquiry – WPMAQ19 – New process added to view contact information.**

- **Print Work Order Request – WPMAR03 –** New process added to request a work order to be printed. Provides the user with capability to request the summary Work Order page with the option to print the detail sections.

- **Work Order – WPMAR04 –** New Work Order Form. Provides the printing of all or part of the Work Order. Work Order will be printed in PDF format with the Work Order Number in bar code symbology to enable the scanning of the Work Order Number to quickly retrieve the record for update.

- **Utilization Report Request – WPMAR07 –** New process added to request a Utilization report to be printed.

- **Utilization Report – WPMAR08 –** New process that provides the user with an asset utilization report in PDF format.

- **Address Add/Update/Delete – WPMAU01 –** New process added to enable maintenance personnel to maintain address information relating to maintenance / utilization processes e.g. Maintenance Activity, Equipment Pool and etc.

- **Auto Generate Work Orders – WPSAB52 –** New process added that automatically generated Work Orders using the established preventative maintenance schedules, time intervals, last perfomred dates and utilization data when the asset has preventative maintenance scheduled base upon utilization.

- **Clean Up User Tracking – WPSAB57** – Performs housekeeping on User Tracking transactions on basis of the SQL Agent Scheduler after every twenty minutes.

- **Work Order Update Background State – WPSAB58** – Background Component for online Work Order Add/Update/Delete process in maintaining state used in concert with background process scheduler.

- **Maintenance Inquiry Extract Viewer – WPUTR24 –** Process was changed to provide capability to view appropriate queries for the maintenance application user. Apply Maintenance Activity Identification and Equipment Pool to data security viewing.

- **Reports Manager Maintenance – WPUTR25 –** Process was changed to support the new DPAS Maintenance / Utilization Application.

- **Work Plan Detail Viewer – WCGLX42 –** New process added to allow the ability to view details about a maintenance work plan.

- **Maintenance Asset Master Add/Delete Common Function – WCGLX44 –** New process that determines the asset's Maintenance Management status. When subject to Maintenance Management, the process will ensure the correct row is in the Maintenance Asset Master table. When not subject to Maintenance Management, the process will delete the asset row from the Maintenance Asset Master table when one exists.

- **My Action Feeder Common Function – WCGLX47 –** New Maintenance and Utilization process added for My Action Feeder.

- **Work Order Number Common Function – WCGLX48** – New process used to generate Work Order Numbers.

- **Maintenance and Utilization Statistics Extraction – WCGLX49** – New process added to gather Maintenance and Utilization counts and then update Maintenance and Utilization Statistics tables.

- **Maintenance Attachment Viewer/Delete – WCGLX50 –** Process modified to enable the Maintenance and Utilization Application user to view / delete attachments.

- **SQL Server Agent Job Audit Log Header Program Usage – WCGLX51** – New process that will be run in the background to capture user transaction activity that will be recorded in the audit logs.

- **Realtime Report Generator – WCGLX52** – New process that enables Maintenance and Utilization reports to be generated on demand and displayed in a new window real-time reather than view them from the Report Viewer. Process will initially be used to enable the viewing of Work Orders that were created / updated without having to request it to be printed and then viewed in another window.

- **Utilization Total Common DB Function Stored Procedure – WVDBV01 –** New process added to DPAS to streamline the Utilization recording / retrieval.

- **Warranty Expiration Common DB Function Stored Procedure – WVDBV02 –** New process added that is used to determine when a warranty clause is expired.

- **Asset Utilization Log In – WVDBV06 –** New process added for Asset Utilization Log In as a DPAS data base service.

- **Utilization Insert – WVDBV07 –** New process added for Asset Utilization Inserts as a DPAS data base service.

- **Utilization Update – WVDBV08 –** New process added for Asset Utilization Updates as a DPAS data base service.

- **Work Plan Id Browse – WCMAM02 –** New process added to provide the capability to browse for a Maintenance Plan.

- **SKU Browse – WCMAM03 –** New process added to provide the capability to browse the Supply Store for a specific part.

- **Asset Identification Browse – WCMAM04 –** Modified process to function within the Maintenance and Utilization Application.

- **Stock Number Browse – WCMAM05 –** Modified process to function within the Maintenance and Utilization Application.

- **Address Browse – WCMAM06 –** Modified process to function within the Maintenance and Utilization Application.

- **Work Order Browse – WCMAM07 –** New process added to browse for a Work Order.

- **Maintenance and Utilization Contract Number Browse – WCMAM08 –** New process added to browse Maintenance and Utilization Contract Number.

- **DPAS ABUDL Framework – WCGLM23 –** Process was modified to support the DPAS Maintenance and Utilization Application.

This release contains the following Program Trouble Reports (PTRs):

Accounting

Improvement Add/Update/Delete – WPACN02 – The user reported errors when adding CIP improvements and when generating monthly depreciation. For CIP Asset Improvement option, the process was modified to correct an issue where the user changed the asset's Stock Number information prior to receiving the CIP Improvement. In addition the process was corrected to address error messages generated for month-end Activity based depreciation on Improvements. Remedy Tickets 95305 and 95797 apply. PTR 9185 applies.

Depreciation Update – WPACN10 – (Multiple issues) – User reported problems with the General Property Depreciation Update. The process was corrected to address multiple issues. 1. Search Criteria: The UIC dropdown was corrected to list all active UIC's under Logged-in Accountable UIC. 2.

Corrected inconsistencies in the Depreciation Type value display. 3. Corrected the process search criteria to address issues between selecting Personal Property and entering an asset id and selecting personal property improvement and entering an asset id. Remedy Ticket 95521 applies. PTRs 9184 and 9261 apply.

Depreciation Scheduler – WPACN12 – Corrected the process to allow the user to enter the date manually or to pick the date utilizing the date control. PTR 9265 applies.

Depreciation Inquiry - WPACQ01 – Corrected the process to default the value "AST" as the Depreciation Type Code on the Depreciation Inquiry Search Criteria page. PTR 9267 applies

Line of Accounting Browse – WCGLM17 –
  1) Modified the process for the program year field as follows: 1. Field must accept 0-9, "X" and "M". If invalid entry, then display an error 611 vice the current error message as the current message is inappropriate. 2. Field must validate that "X" and "M" cannot be input together, ex: "XMM" or "MX" or any combination of "M" and "X". If invalid entry, display appropriate error message. 3. If only one character is input and that character is "X", then populate LOA with 8 "X"s for Program Year. 4. If only one character is input and that character is "M", then populate LOA with 8 "M"s for Program Year 5. If more than one character, assuming the appropriate combination, is input, populate with data as input. PTR 9215 applies.

  2) Corrected the process to not display blanks in the PGM YR and OBJ Class CD when the Reset Button is used. PTR 9289 applies.

CIP LOA Interface Export – WPACI13 - Modified the process to support a blank deactivation date as being not de-activated. PTR 9190 and 9279 apply.

Accounting Transaction Activity Agency Extract – WCUSS27 – Modified the select logic due to the problem of having more than one UIC with the same value. PTR 9226 applies.

CIP Project Add/Update/Delete – WPACN15 – User reported receiving the error "CIP Transaction Failed". The process was corrected to pass all of the required information to the Accounting function. Remedy Ticket 96372 applies. PTR 9447 applies.

Appropriation Browse – WCGLM57
  1) Modify logic for Program year field to support "M" as input. PTR 9214 applies.

  2) Modified the process to correct the problem of returning Appropriations with a blank end date.

Appropriation Mass Change Update – WPUTB34 – Process was corrected to utilize the "EN" status code, update the "LST_UPDT_BY" field and update the "PGM ID" field. PTR 9292 applies.

Accounting Interface Master Data Import Status Report – WPACR38 – Corrected the process to update the report status code in order to show that a report completed or whether the report aborted. PTR 9262 applies.

Asset Management

Asset Receiving – WPHRN11

1) User reported that the process needs to perform the same validation as the Asset Update for components with Embedded Costs to update the Serial Number. The process was corrected to perform the same validation as Asset Update for Components with Embedded costs. Remedy Ticket 93383 applies. PTR 8924 applies.

2) The user reported that the process is giving the error "Trading Partner Number is mandatory". Corrected the process to display the error only for Capital Assets with Process Action equal to "ITRO". Remedy Ticket 95370 applies. PTR 9244 applies.

3) Process was modified to add "NDT" to the list of values available in the UII Status Dropdown. PTR 9349 applies.

Auto Create Soft Improvements Batch – WPSAB46 – Process was corrected to update the "CIP CMPLTD QT". PTR 9340 applies.

Location Validation – WPHRN11/WPSAB13 – The latest version of the programs were released from DPAS Maintenance. PTR 8899 applies.

Custodian Add/Update/Delete - WPHRN42 – The process is writing "*" to the data base if not selected which results in "*" displaying on reports and inquiries. The process was correct to write and display blanks. PTR 9245 applies.

Contract Add/Update/Delete - PA – WPHRN49 – User cannot manually enter a Cage Code. Error messages were not applicable to the screen since the user has drop down selection capability. The process was modified to remove instruction text messages 4 and error messages 162, 132 and 161 were all in reference to Cage Code format since they are no longer applicable. PTR 8948 applies.

Custodian Inquiry – WPHRNQ13 – User reported the detail pages were getting stuck on loading. The process was corrected to execute properly. Remedy 95970 and PTR 9324 applies.

Asset Update – WPHRN51 - The user reported that they are unable to update the Depreciation Code on several Assets with the correct dollar amount and Capital Code but wrong Depreciation Code. The process was corrected so that when the user changes the Price and Capital Code to "S" at the same time, the Depreciation Code is changed from Non-Capital Non-reportable Asset "N" to Capital-reportable "T". Remedy Ticket 95744 applies. PTR 9207 applies.

Asset Disposition Reversal – WPHRN70 – DPAS C reported a problem when doing a disposition reversal. The process **was** modified to correct the "Delete PAO" role to include the Asset Receiving program which is required in order to reverse assets. Remedy Ticket 89398 applies. PTR 7810 applies.

Asset Inquiry – WPHRQ14

1) Modified the proces to show the Subhead from the Appropriation transaction in the Subhead field instead of the Object Class Code. PTR 9001 applies.

2) Corrected the display of incorrect information on Asset Status Code, Action Code and Suspect Loss Status Code on Basic Part of "ALL" screen and Capital Code on Accounting Part of both "Account" and "All" screens. Also corrected the missing data for the UII on "All" screen. Corrected the description on the Basic part in "All" screen. PTR 9123 applies.

3) The user reported that the Asset Inquiry is not displaying information for deleted records and the deleted record is active. Corrected the process to only consider the Delete Flag on the Asset Master and not on the Catalog or Manufacturer records if the Stock Number and Manufacturer Records were deleted after the asset was disposed of. Remedy Ticket 95095 applies. PTR 9149 applies.

4) The user reported that on the field selection page, if the user makes a change to a saved favorite and hits "update selection list", the name of the saved inquiry disappears from the field that shows it. This pertains to all inquiries. The process was corrected to display the name of the inquiry. Remedy Ticket 95500 applies. PTR 9202 applies.

5) User reported that the Asset Inquiry is split in to 3 pages. A correction was made to the Report Viewer to not split the report in to 3 pages. Remedy Ticket 95376 applies. PTR 9204 applies.

6) Modified the process to allow the selection of the Maintenance Activity Name. PTR 9445 applies.

Contractor Inquiry – WPHRQ29 – User reported misspelling. Modified the process to correct the misspelling of "DODAAC" on the detail screen. Remedy Ticket 94530 applies. PTR 9009 applies.

Accountable (ACTBL) UIC/UIC Add/Update/Delete – WPUTN03 – User reported that when the APO Office Name is changed, it is not modified properly since "X"s are shown on the screen after hitting the Update Button. The process was corrected to properly display the APO Office name. In addition the process was corrected to display the appropriate error message when letters are entered in the phone number field. Remedy Ticket 95314 applies. PTR 9122 applies.

Custodian Number Browse – WPHRN65 – Modified the browse to not pass the "AM" parameter. This change only applies to initialize Custodian Inventory process search criteria screen. Remedy Ticket 95814 applies. PTR 9231 applies.

Catalog

Stock Number Mass Update Batch – WPSAB18

1) User reported an issue with the Mass Stock Number Change. Corrected the process to keep user entered Depreciation period unless it breaks the rule about being over the max when the user changes Asset Category Code (ACC) of Capital Assets. Remedy Ticket 94998 applies. PTR 9087 and 9088 applies.

2) Modified the process to write a management message for each site that uses the Catalog Base Key of the changing Stock Number with missing

accounting data. Corrected the Report to write UIC and assets that match the site. PTR 9003 applies.

3) Process was modified to remove "Select An Item" from the Maintenance Group choices to prevent the ECC validation from aborting. PTR 9352 applies.

Stock Number Add/Update/Delete/Stock Number Browse – WPCTN01 and WCGLM12

1) The process was modified to display error message 307 "Desc must be alphanumeric (s) $, -, /, #, &, comma, period and space" with supported special characters when an invalid character is entered. PTR 9100 applies.

2) The user reported receiving error 498 when trying to add stock number under "Catalog". Process corrected to display Error Message "598 - ECC does not match ACC" instead of "498-ECC does not exist". Remedy Ticket 95342 applies. PTRs 9174 and 9144 apply.

3) Corrected the process to use special character, wild card, no spaces function for stock number validation. PTR 9241 applies.

4) Modified the process to expand the allowed space for Vehicle Group Cd and ECC from 30 to 34 characters respectively in order to prevent the process from sending error messages. PTR 9352 applies.

5) Process was modified to remove "Select An Item" from the Maintenance Group choices to prevent the ECC validation from aborting. PTR 9351, 9353 and 9355 applies.

Stock Number Inquiry – WPCTQ01 – Process was corrected to return values when the user is searching by the "MAINT GRP ID". PTR 9257 applies.

Reference Publication Add/Update/Delete – WPCTN09 – The process was modified to display the appropriate error message when an invalid character is entered. PTR 9240 applies.

Security
Security Login Validation – WPSEN01 – Process was developed **to a**pply a limit to the number of concurrent sessions assigned to any single named user addressing applicaion 3410 Standard Instruction Guide (STIG) finding. PTR 9069 applies.

User Role Assignment – WPSEN04 – User requested adding a new Property Accountability Maintenance and Utilization Role "PA M and U Setup" to production and assign it to Agency Navy. Process was modified to add the role and removed programs Maintenance Management Assignment Add/Update/Delete and Maintenance Group Id Add/Update/Delete from the following roles: Accountable Property Officer, Property Administrator, Property Administrator for Navy, Property Administrator for NGA, Agency Coordinator and Catalog Manager. Remedy Ticket 95884 applies. PTR 9227 applies.

Supply Room

Print AIT Utility – WPSRN05 – User reported that the Print label request is

not deleted as stated in requirements. The process was corrected to delete the print label in accordance with the requirements. PTR 9205 applies.

SKU Add/update/Delete – WPSRN06 – Corrected the process to update the History Remarks, Last Transaction Date and Time, Last Updated by and Transaction Code fields when inserting a new request. PTR 9206 applies.

Order Add/Update/Delete – WPSRN10 – The user reported that when the Order by User Key in the Supply Room Due In transaction is blank, trying to update the order via Order Add/Update/Delete results in an application error. The process was corrected to function properly. PTR 9111 applies.

Miscellaneous

DPAS Version Number – WPSAN29 – Change web version number on footer to 2.0.00. PTR 8457 applies.

Batch Queue Maintenance – WPSAN30 – (XML)
1) Viewer Pop-Up was modified to not error when the process does not have an XML string associated with it. PTR 9114 applies.

2) Modified the process to include a new status code of "EN" for "Error Not Processed" under the queue status dropdown list. PTR 9337 applies.

Report Viewer – WPGLX14 – Modified the process to ensure the tabs appearance and behavior is consistent across implementation of Report Viewer 2010. PTR 9246 applies.

Process Queue – WPSAN17 – Modified the process to include a new status code of "EN" for "Error Not Processed" under the queue status dropdown list. PTR 9288 applies.

DPAS ABUDL Framework – WCGLM23

1) Modified the process to streamline code design, standards and page validation inefficiencies to support enhanced functionality for DPAS. PTR 8616 applies.

2) Corrected the process to call the User Security function framework. PTR 8747 applies.

3) User reported inconsistencies in Welcome Pages for the three applications. Modified the welcome pages for the three applications for consistent look. Modified the Maintenance and Utilization Page Title font and size to match Property Accountability. Supply Store changes: removed red from page title; expanded the Message of the Day field to same as Property Accountability. Remedy Ticket 93564 applies. PTR 9034 applies.

Batch Business Layer (Business layers of programs) – WCGLM08 – Modified the Data Reader Management Method to include the "close procedure". PTR 9258 applies.
