Release 4.1.00 for the Defense Property Accountability System (DPAS) was
released on July 29, 2016. This release implements a number of System Change
Requests and corrects a number of program deficiencies identified by the user
community and through testing by the development team. The updates impact the
Property Accountability, Maintenance and Utilization Warehouse Management
and Security modules.

Property Accountability (PA) Module

The following PA Help Tickets were closed by this release:

- Asset Inquiry (WPHRQ14)
    - Corrected a deficiency which caused an Unexpected Error when
      using the Save Icon to extract the results to Excel (Help Ticket
      #9017, 9246, 9309, 9643).

- Asset Disposition (WPHRN29)
    - Corrected a deficiency that caused the user to not be able to
      dispose of specific assets (Help Ticket #9773).

- CFO Accting Statement (WPACR19)
    - Corrected a deficiency that that was not properly alerting users
      with security access lower than Accountable UIC that the report
      must be run at Accountable UIC or higher security access (Help
      Ticket # 10208).

- Custodian Inquiry (WPHRQ13)
    - Corrected a deficiency that displayed deleted custodians and sub-
      custodians in the inquiry results (Help Ticket # 9472, 9550, 9590,
      9695, 9873, 10284, 10465, 10522).

- FEDLOG Recon Load Batch (WPSAB04)
    - Corrected a deficiency that was preventing newer FEDLOG data from
      being loaded in the system (Help Ticket # 1078, 5714, 7236, 8843,
      9227, 9418, 9848).

- Inventory Reconciliation Report (WPHRR05)
    - Corrected a deficiency which caused the Location / Sub Location
      fields to not be printed on the Reconciliation Report (Help
      Ticket #9352).

- Location AUD (WPUTN02)
    - Corrected a deficiency that cause the UIC dropdown list to be
      empty after the user's session expired (Help Ticket #9720, 10301,
      10395).

- View / Schedule Reports (WPUTR25)
    - o Corrected a deficiency which caused some generated reports to not be able to be viewed by other users with the same security access as the report creator (Help Ticket #9818).

Maintenance & Utilization (M&U) Module:

The following System Change Requests (SCRs) were implemented for the Maintenance and Utilization Module in this release:

- **SCR 846 – Emergency/Emergency Response Vehicle Updates**

This SCR requested the addition of the Emergency / Emergency Response classification to the Asset Level reporting for GSA.

- **SCR 991 – GSA VCSS Cost Load**

This SCR requested the functionality to load the vehicle cost extract from GSA Drive-Thru, VCSS for vehicles located in DPAS. This capability is being implemented as a user upload feature.

- **SCR 992 – GSA Fuel Use Pull**

This SCR requested the functionality to load the vehicle fuel cost extract from GSA Drive-Thru reports. This capability is being implemented as a user upload feature.

The following M&U Help Tickets were closed by this release:

- Schedule Preventive Maintenance (WPMAN11)
    - Corrected a deficiency that prevented users from being able to view and update preventive maintenance schedule records using work plans in a different maint activity than the asset (Help Ticket # 9836, 9893, 10578).
    - Corrected a deficiency that caused a record to not be updated if the only field changed by the user was the "Last Util Qty" (Help Ticket # 10019, 10073, 10247, 10273).
- Work Order AU (WPMAN12)
    - Corrected a deficiency that caused utilization to not be recorded when closing a work order (Help Ticket # 9503, 9878, 9953, 10247, 10385, 10576).

The following System Change Requests (SCRs) were implemented for the Warehouse Management Module in this release:

- **SCR 690 – Automate Transportation Movement**

This SCR requested DPAS implement DLMS ADC316 capability which enables the Remote Storage Activity (RSA) to communicate electronically with the Transportation Management Office (TMO) it transportation requirements. This capability will enable the TMO to electronically receive Transportation Requests / Cancellation Requests at the Serial Nbr / UII level from DPAS and enable the TMO to report shipment status and carrier information at the detail level back to DPAS that DPAS will use in the generation of the following DLMS Transaction Sets: 1) 945A (Warehouse Shipment Advice to the ICP) and 2) 856S (Customer Shipment Notification). This capability will eliminate the user requirement of manually checking for shipment status using DLA MRO Tracker eportal. The initial use of this capability will be with the Defense Logistics Agency's (DLA) Distribution Standard System (DSS).

- **SCR 887 – Inspection Process Addition**

This SCR requested the capability for the user to create their own Inspection Type Actions and to establish expected "Results" for each. The new capability is being added as new Catalog features which have resulted in how the Stock Nbr process permits the user to schedule actions. The existing action types will be retained, with the user being able to add additional ones. The implementation within this release is the initial phase for this SCR. Future plans include adding an Inspection process to the menu and permitting the user during the setup to select whether the action is a Quality Control or an Inspection Type Action.

- **SCR 916 – Date of Installation Update**

This SCR requested the DPAS provide the capability to identify the "Date of Installation" (DOI) of items being added to a Set Kit Outfit (SKO). The SKO process is used to manage generic kits e.g. Box Gear, and specific kits e.g. kits tailored / issued to specific individuals. There is a requirement to know when a specific item was provided to the individual as some items have a "Use Life" that needs to be tracked, in addition to the Warehouse Shelf Life, so as to know when the item needs to be replaced. The DOI capability is being added to the SKO and Serial Update processes.

The following Warehouse Help Tickets were closed by this release:

- Set Kits Outfit (LPWHN41)
  - Corrected the DLMS transaction logic for SKO assembly to create the appropriate 527R (for kit headers) and 867I (for assembled

components) and generation of the correct DLMS transactions and
quantities (Help Ticket #5925).

- Material Release Order (LPWHN35)
    o Corrected the program to allow users to print a NE-Disposal Release
      Order DD Form 1348 when the Document Number is in a NW-New Doc Stage
      Code (Help Ticket #6376).
    o Corrected the program to allow users to enter remarks on a Document
      regardless of the current stage of the MRO request (Help Ticket
      #6981).

- Member Activity Inquiry (LPWHQ36)
    o Corrected a deficiency that caused the inquiry to error out when
      searching by UIC (Help Ticket #6922, #9021, #9593).

- Materiel Movement Pick (LPWHN64.1)
    o Corrected a deficiency that caused the allocations to not allow the
      user to select their assets when continuing the Pick (Help Ticket
      #7383).

- Unit Returns (LPWHN47)
    o Corrected a deficiency that caused the Outstanding Item Report to
      display the Warehouse default return Condition Code when it should
      have displayed the assets Condition Code at Issue (Help Ticket
      #9636, 10286).

- Individual Issue (LPWHN32)
    o Corrected a deficiency that caused duplicate items to be issued to a
      member when the clerk selects the "Enter" key to complete the issue
      (Help Ticket #9771, 10104).
    o Corrected a deficiency to allow reactivation of expired users by
      updating the EAS date to a future date (Help Ticket #9372, 10072,
      10657).

- ICN Update (LPWHN58)
    o Corrected a deficiency that caused date differences between time
      zones in date fields (Help Ticket #9978, 8093).

- ICN Inventory Inquiry (LPWHQ47)
    o Corrected a deficiency that caused the inquiry to error out when
      searching (Help Ticket #9851).

- JACKS Shelf Life Web Service (LPCTI20)
    o Corrected a deficiency that caused slow performance when running the
      JACKS background job (Help Ticket #9721, 10004).

Security Module

The following Security Help Tickets were closed by this release:

- User AUD (LPSEN05)
  - o Corrected a deficiency which caused user accounts to revert back to suspense at midnight after reactivation instead of after the intended 5 day period (Help Ticket #10147).
- User Tier AUD (LPSEN02)
  - o Corrected a deficiency which caused the user to be unable to switch between tiers after user session expiration (Help Ticket #9051, #9653).
